

THE AGILE RECOMMENDER ENGINE

A VERY GOOD REASON TO USE THE AGILE IOT GATEWAY

Sept. 2018 | Seda Polat Erdeniz, Alexander Felfernig, TU Graz

IoT Gateway users need assistance for using a new device and a new platform.

The AGILE Recommender Engine helps users to find best fitting applications, devices and settings.

RECOMMENDABLE ITEMS

APPS

Best fitting apps (workflows and nodes) from [NodeRed.org](https://nodered.org/) are recommended to the gateway app developers to be easily integrated into their codes.

DEVICES

Best fitting IoT devices from [Amazon.com](https://www.amazon.com/) are recommended to the gateway users to be ordered and connected to their gateways.

SETTINGS

During the installation of an IoT gateway (ramp-up phase), consistent environmental settings are recommended to the gateway users.

BENEFITS

Avoid Mass Confusion

Crucial for tackling „mass confusion“ (e.g. helpful for non-expert workflow developers)

Cost Saving

Ramp-up of IoT environments based on configuration technologies provide 40x lower development costs!

Solution is found!

Tackling „no solution can be found“ dilemma in interactive scenarios

The AGILE Recommender Engine is specifically designed and developed for AGILE IoT Gateway which is co-funded by Horizon 2020 Programme for 3 years (2016-2019).
